

# Model Writer

## Progress on the Industrial Use Cases

# UC-FR-01 - Synchronization between models and documents

*Yvan Iussaud*  
*OBEO*

Open source Eclipse project

Domain Specific language

Creates graphical modelers

View point approach

Easy to use (Diagram, table, tree, ...)

### Artifacts

- Graphical Mapping DSL
- Source code
- Documentation (specifier, user)

### Life cycle

- Release train Eclipse
- Dependencies

### Team

- Core team
- External contributors

### Methodology

- Code review
- Plan manual synchronization of artifacts

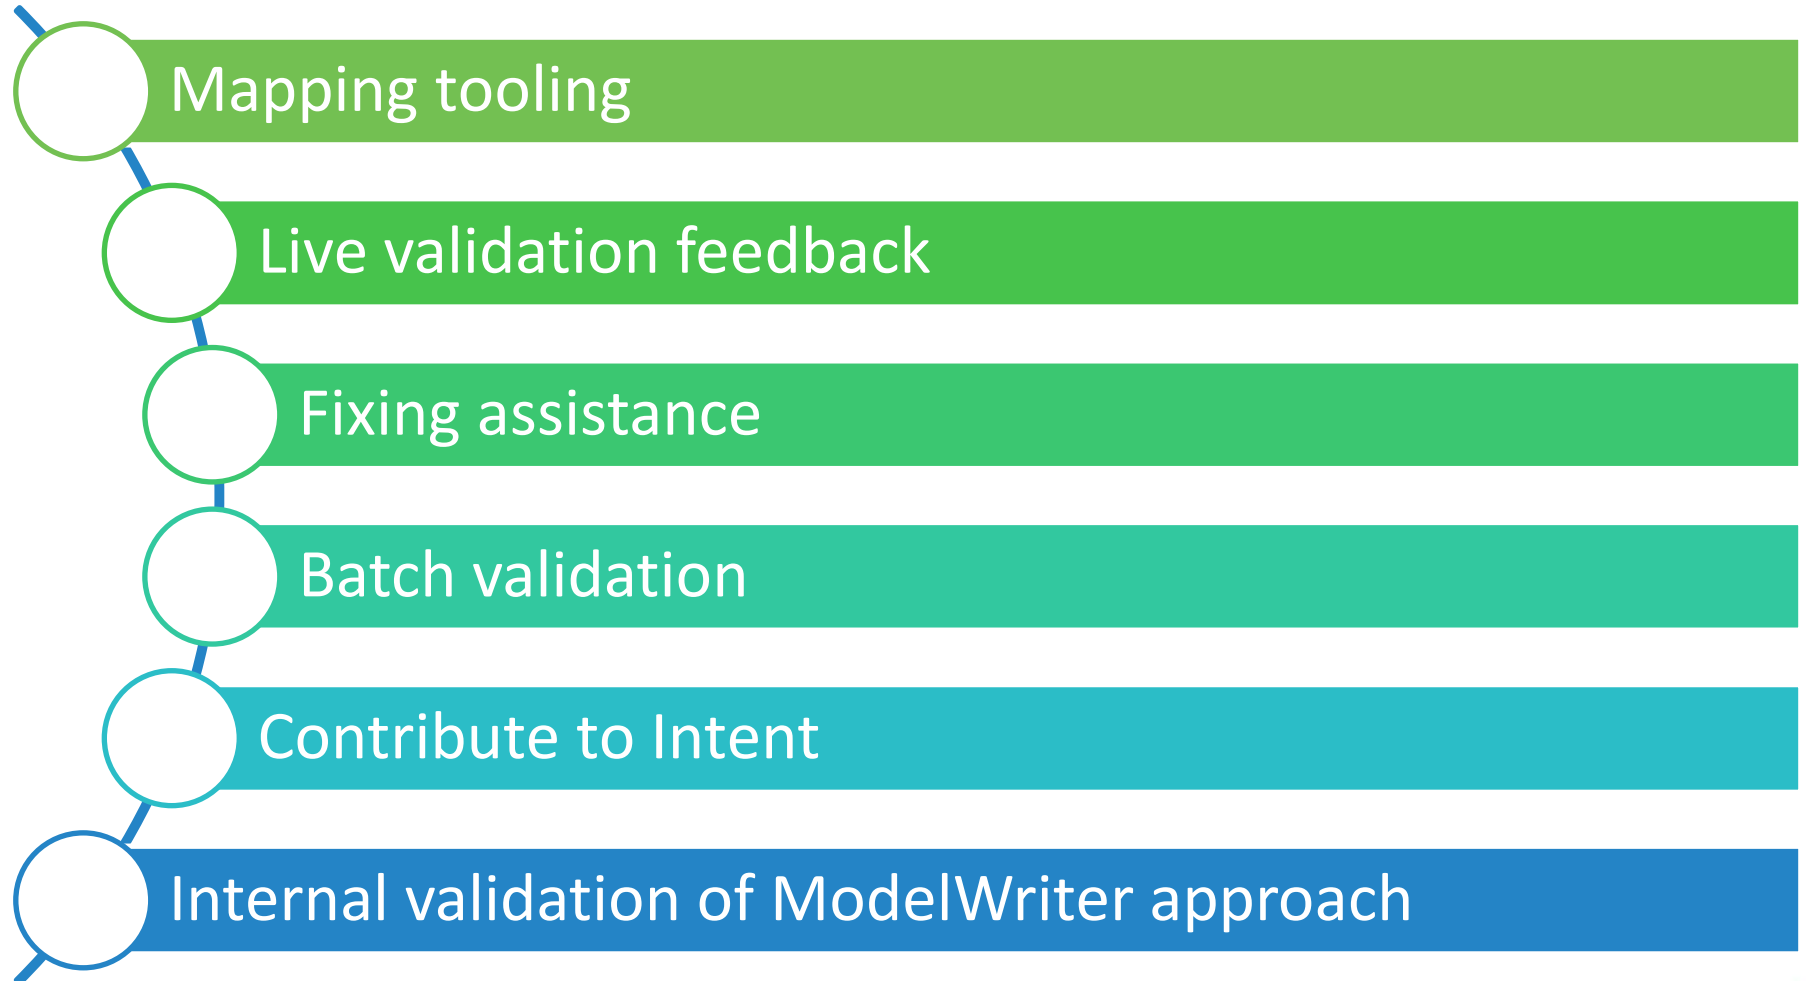

### Synchronization gap

- Development
- Artifacts knowledge is volatile

### Validation

- Release
- Quality

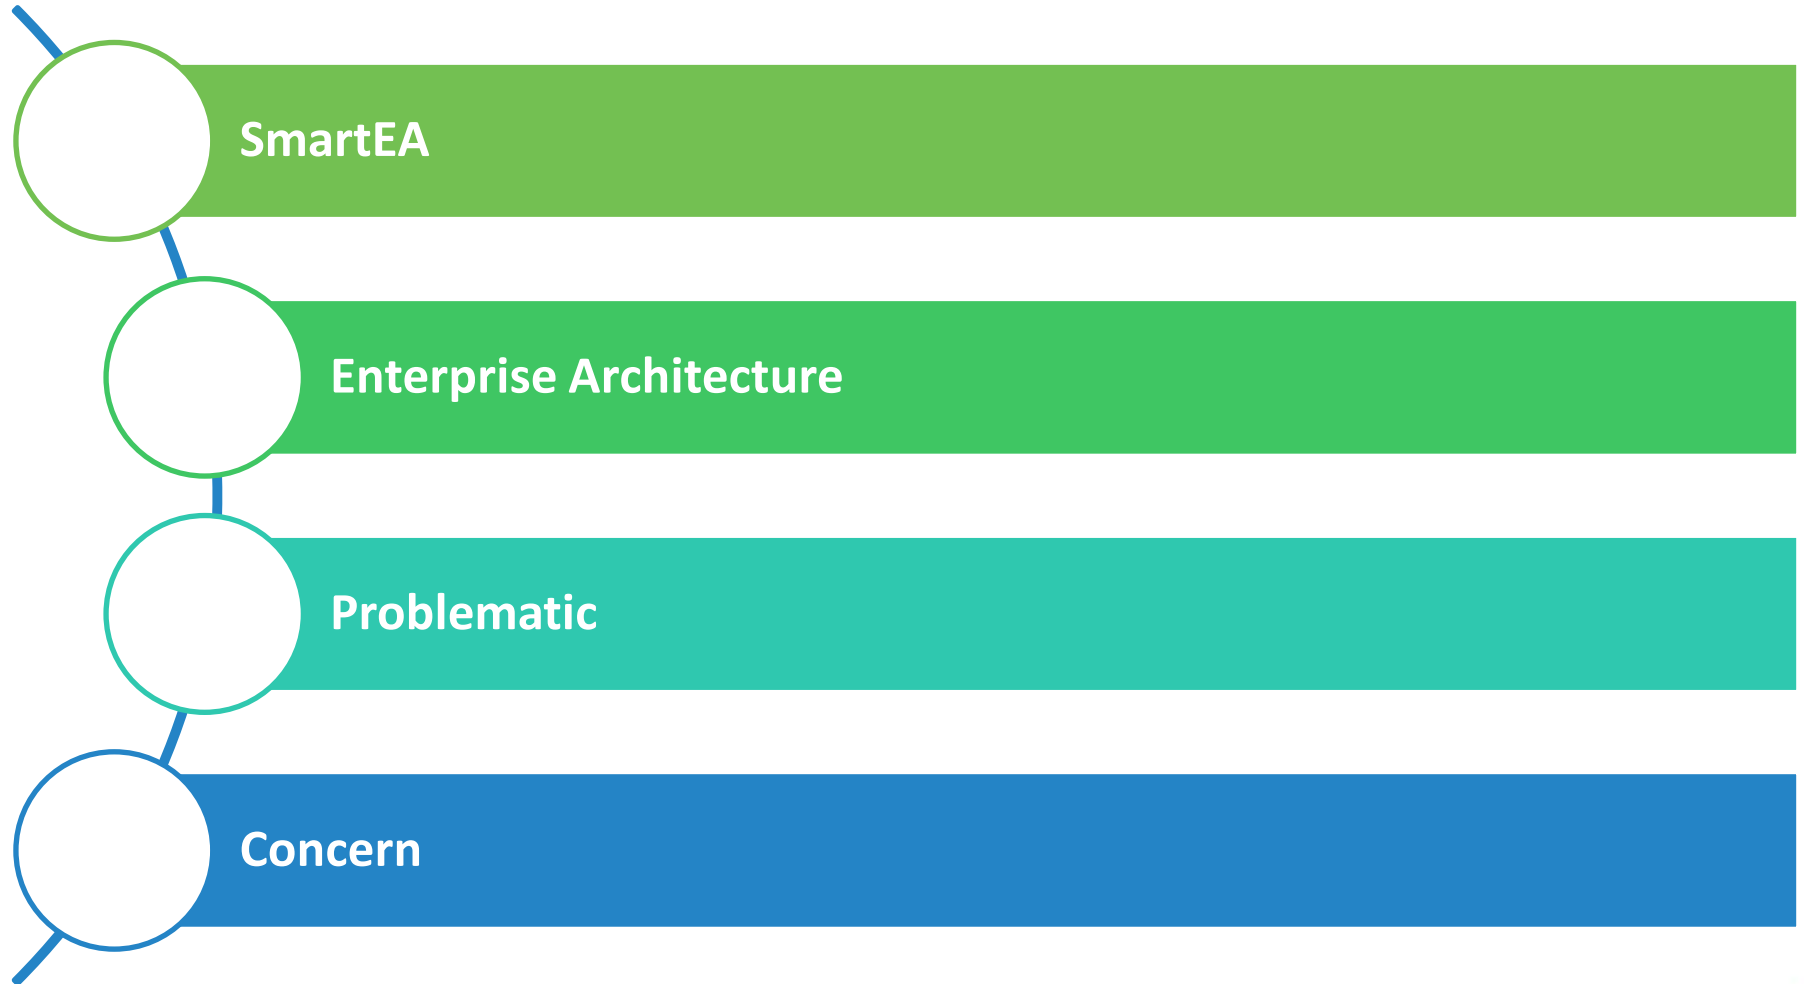

# UC-FR-02 - Enterprise Architecture

*Yvan Iussaud*  
*OBEO*

### Model the company

- Centralize information
- Ease communication in the company
- View point approach

### Support changes in the company

- Business opportunities, business changes, interoperability, new technologies
- Gap analysis
- Impact analysis

### Technical information

- Web portal
- Eclipse and Sirius editors
- Internal model can be changed (TOGAF9, BPMN, ...)

### Define As-Is state

- Import documents
- Consolidate the company model

### Define To-Be state

- Identify possible scenario
- Evaluate possible scenario
- Modify the company model

### Define trajectories

- Gap analysis
- Impact analysis
- Define milestones

### Documentation

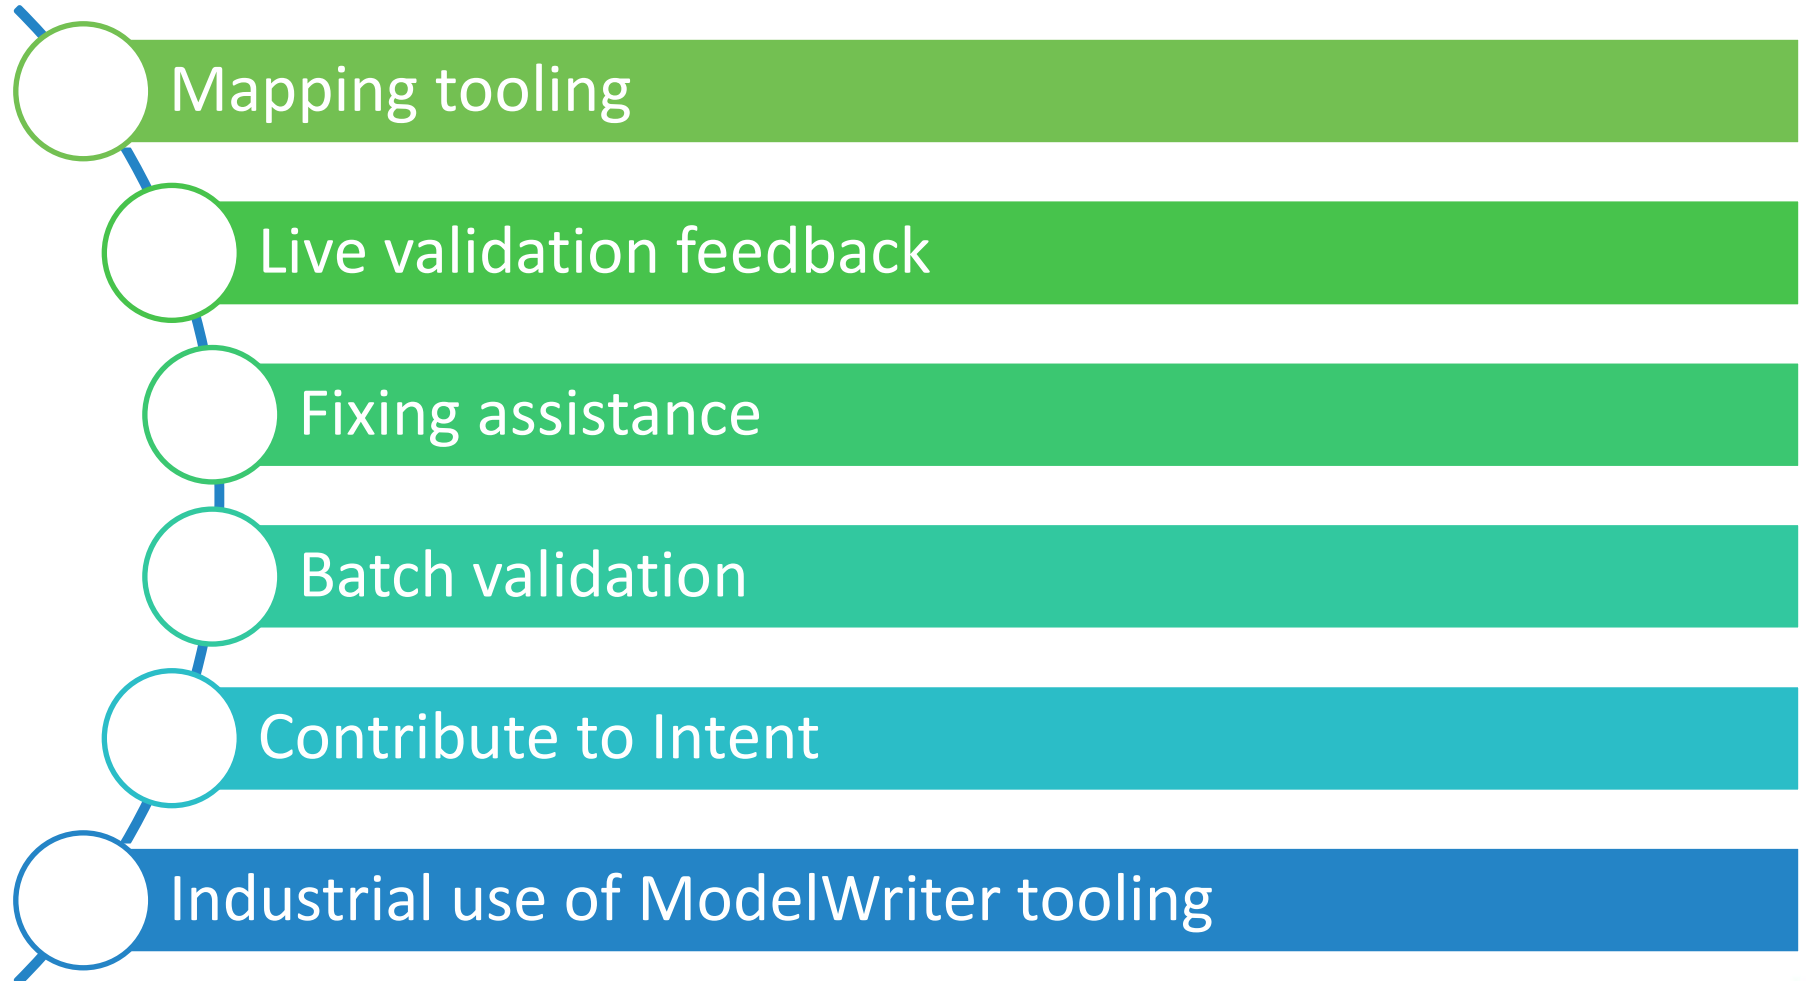

- Keep track of sourced documents
- Keep representation and portal up-to-date

### Synchronization gap

- Organizational changes
- Artifacts knowledge is volatile

### Validation

- Produce documentation of organizational changes
- Quality

# UC-FR-03 - Synchronization of Regulation Documentation with a Design Rule Repository

*Anne MONCEAUX*

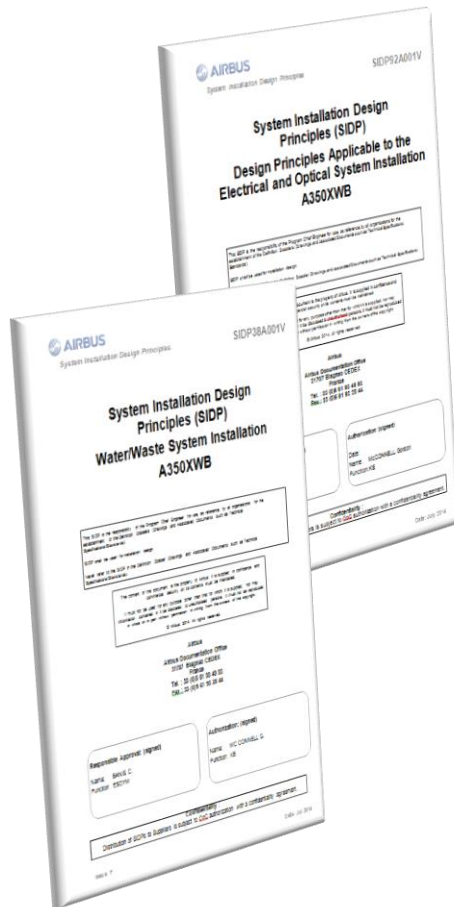

*Airbus Group Innovation*

*Louis ROUCH, Ayhan MOHOVIC*

*Airbus SAS*

# SIDP: “System Installation Design Principles”

## SIDP92A001V-A-784

*For installation of optical and electrical harnesses additional clearance for sagging ( $s$ ) shall be provided as detailed below:*

$s$ ...Sagging of bundle (real behavior of physical bundle in A/C due to gravity, ageing, etc.)

$D$ ...Required Distance

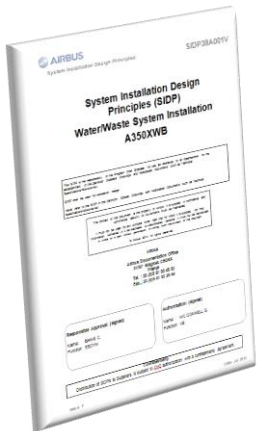

$L$ ...Actual length of a bundle segment between two Attachment Points (as designed in DMU)

**Figure 6: Sagging of bundles between attachment points**

*Note: Unless the bundle has a straight routing,  $L$  is bigger than the pitch between the Attachment Points.*

# Context and problem

- SIDP documents explain how to install the aircraft systems and attach them to the structure. They capitalize the best practices & proven technical solutions.
- SIDP are defined per [ATA chapter](#) (~functional domain) to be applied for [each given A/C project](#): for example “A350 Electrical installation”
- SIPD are [open to Extended Enterprise](#): installation tasks are performed by risk sharing partners.
- SIDP are [living documents](#): during the aircraft development any new DP allowing to satisfy all targets/constraints can be added, assuming it is validated by Airbus dedicated committee.

## Industrial high level needs

---

To improve SIDP creation, maintenance and consultation in order to:

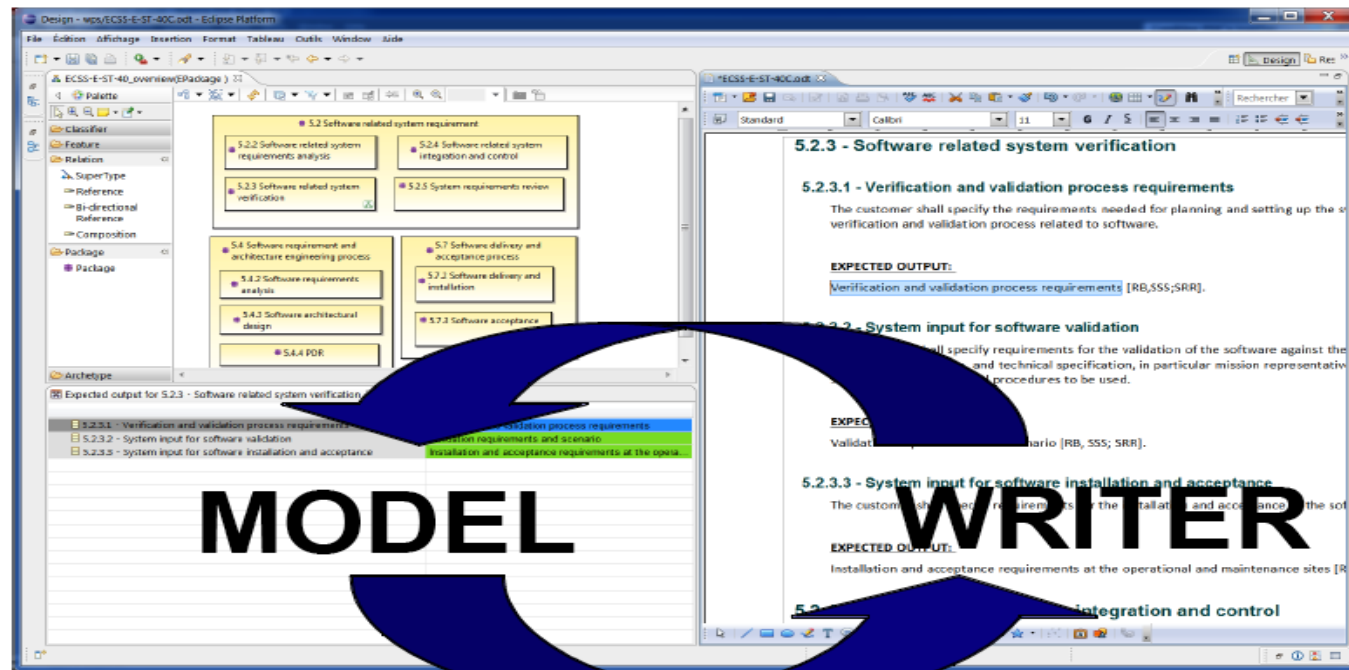

- save costs by supporting DP consultation / retrieval in accordance to the needs
- avoid non-compliance of design caused by DP updating lead times
- keep traceability with upstream regulations and requirements and downstream design models

# Synchronization of regulation documentation with a design rule repository

# UC-FR-03 Synchronization of regulation documentation with a design rule repository

Goal: synchronizing the SIDP database content with documentation

- Create links between text fragments & model elements (manual annotation?, semi-automatic?...)
- Manage consistent synchronization (manage changes)

# UC-FR-03 Synchronization of regulation documentation with a design rule repository

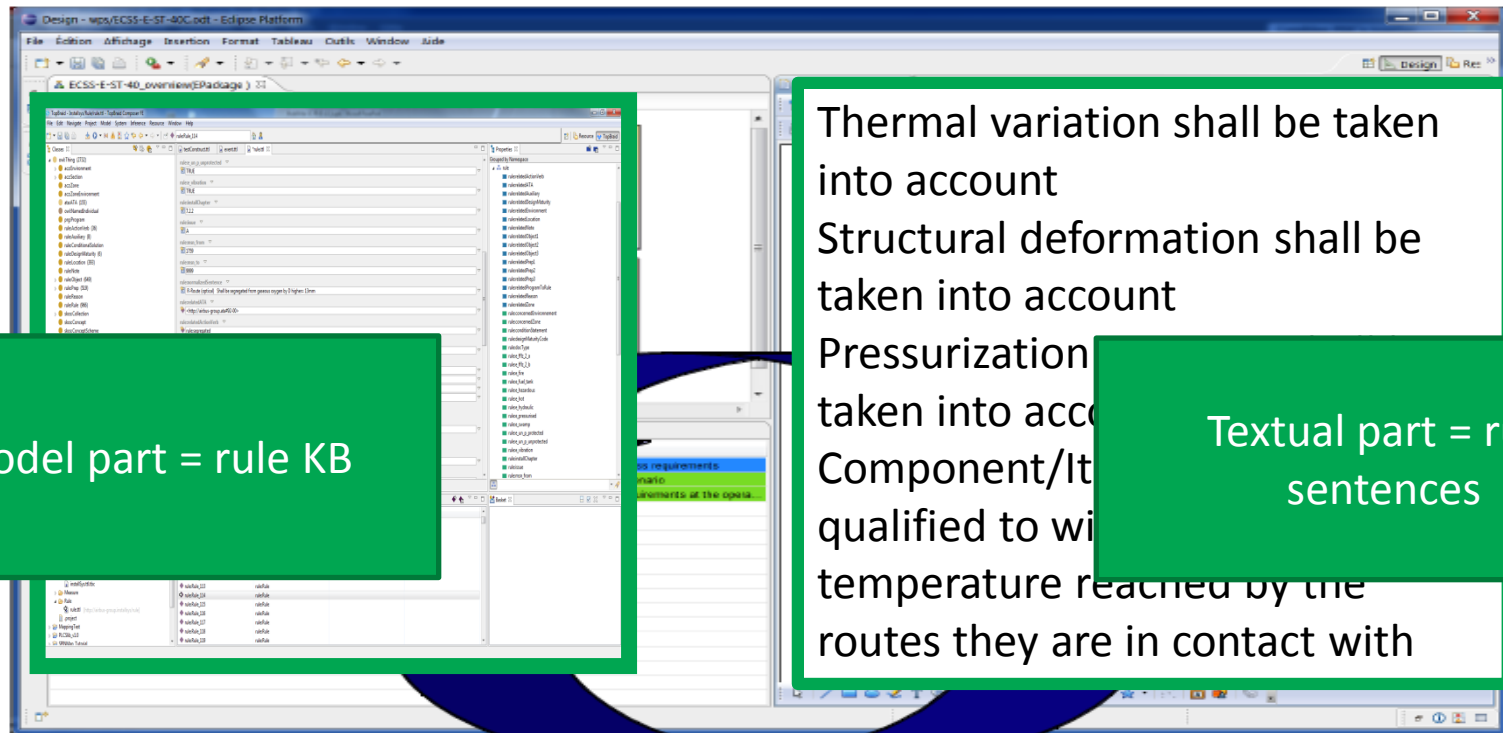

- Approach: limited case on Electrical Installation functional domain
- (Confidential Data - Non Disclosure Agreement finalized in June 2015).
  
- Text
  - 1 document: SIDP ATA 92
  - In our industrial context SIDP are edited using MSWord
  
- Models
  - An OWL model is built that reflects the DB schema: “Rule ontology” (30 classes, 35 object properties and 54 data properties)
  - Automatic population mechanism of the model from a csv BD export produces the KB (45781 triples)

# UC-FR-03 Synchronization of regulation documentation with a design rule repository

Status 1<sup>st</sup> iteration: synchronizing the SIDP KB content and text part

The screenshot shows the Eclipse IDE with a design rule repository (ECSS-E-ST-40) open. The repository is a hierarchical tree structure with various categories and sub-categories. The text editor displays a list of rule sentences, which are the textual part of the design rules.

Model part = rule KB

Thermal variation shall be taken into account  
Structural deformation shall be taken into account  
Pressurization shall be taken into account  
Component/Item shall be qualified to withstand the temperature reached by the routes they are in contact with

Textual part = rule sentences

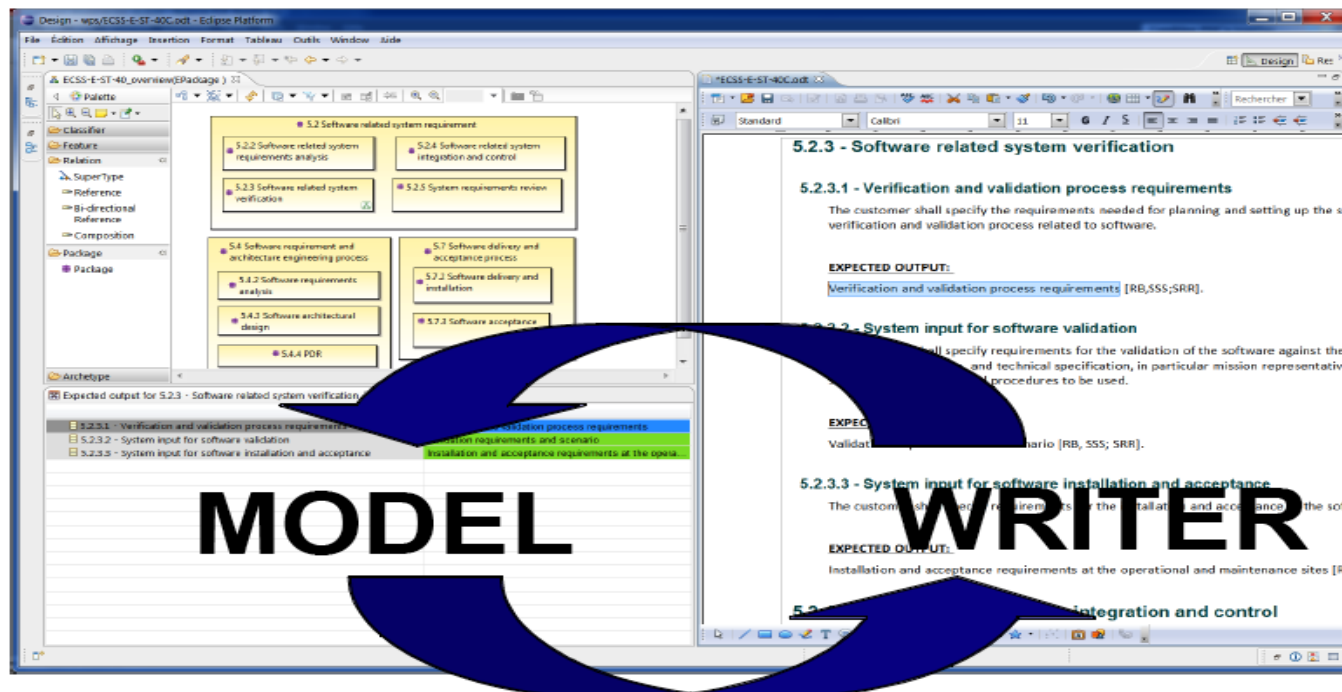

# UC-FR-04 - Production of a Context Specific Design Document

*Anne MONCEAUX*  
*Airbus Group Innovation*  
*Louis ROUCH, Ayhan MOHOVIC*  
*Airbus SAS*

# UC-FR-04 Production of a context specific design document

Goal: producing document according to usage “needs”

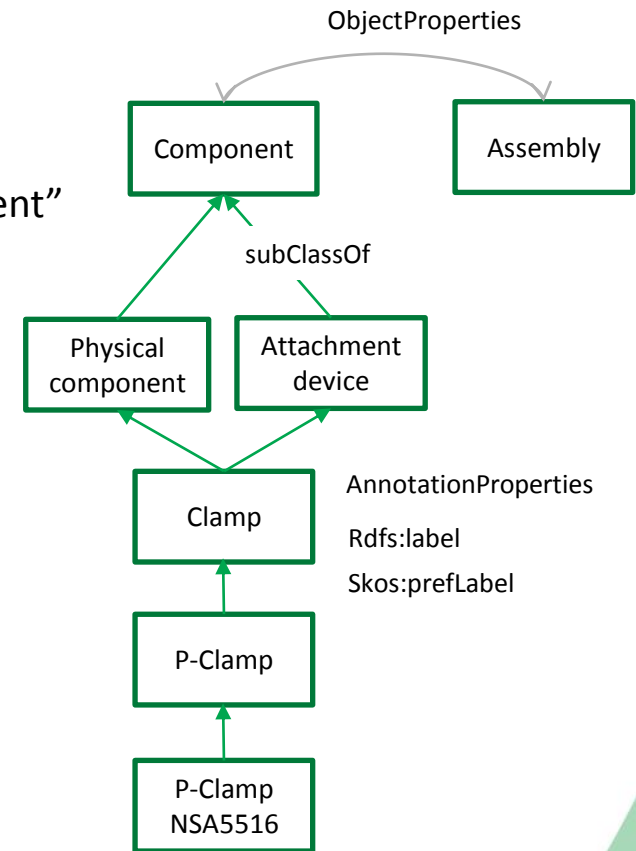

- Produce “filtered” document with subset of Design Principle textual elements according to usage “needs”

# UC-FR-04 Production of a context specific design document

- Approach:
  - use case Electrical Installation functional domain
  - Confidential Data - Non Disclosure Agreement finalized in June 2015
  - Use model elements to retrieve relevant Design Principles
- Text
  - 1 document: SIDP ATA 92
  - In our industrial context SIDP are edited using MSWord
- Models
  - The previous Rule KB (populated Rule ontology)
  - **Component ontology** (476 classes, 21 ObjectProperties and 35 DataProperties)

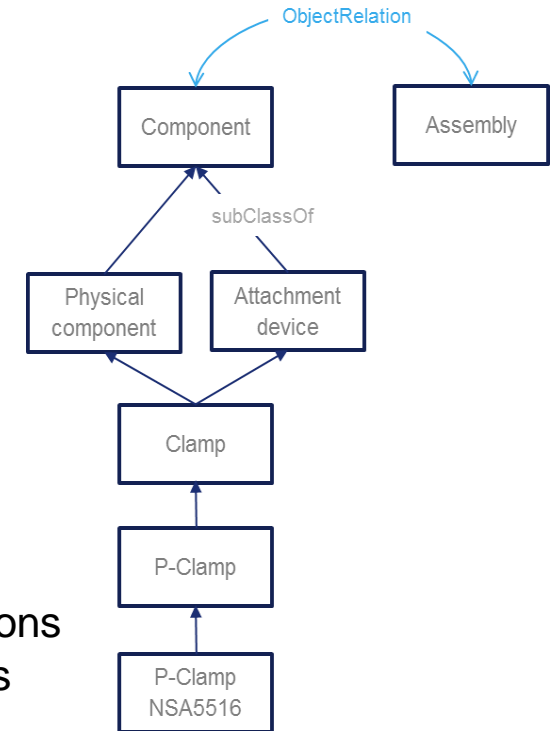

# Component classes taxonomy

# Component classes taxonomy

“P-clamp NSA5516 can be fixed on X with Y”

“Physical component”    “Standard reference”

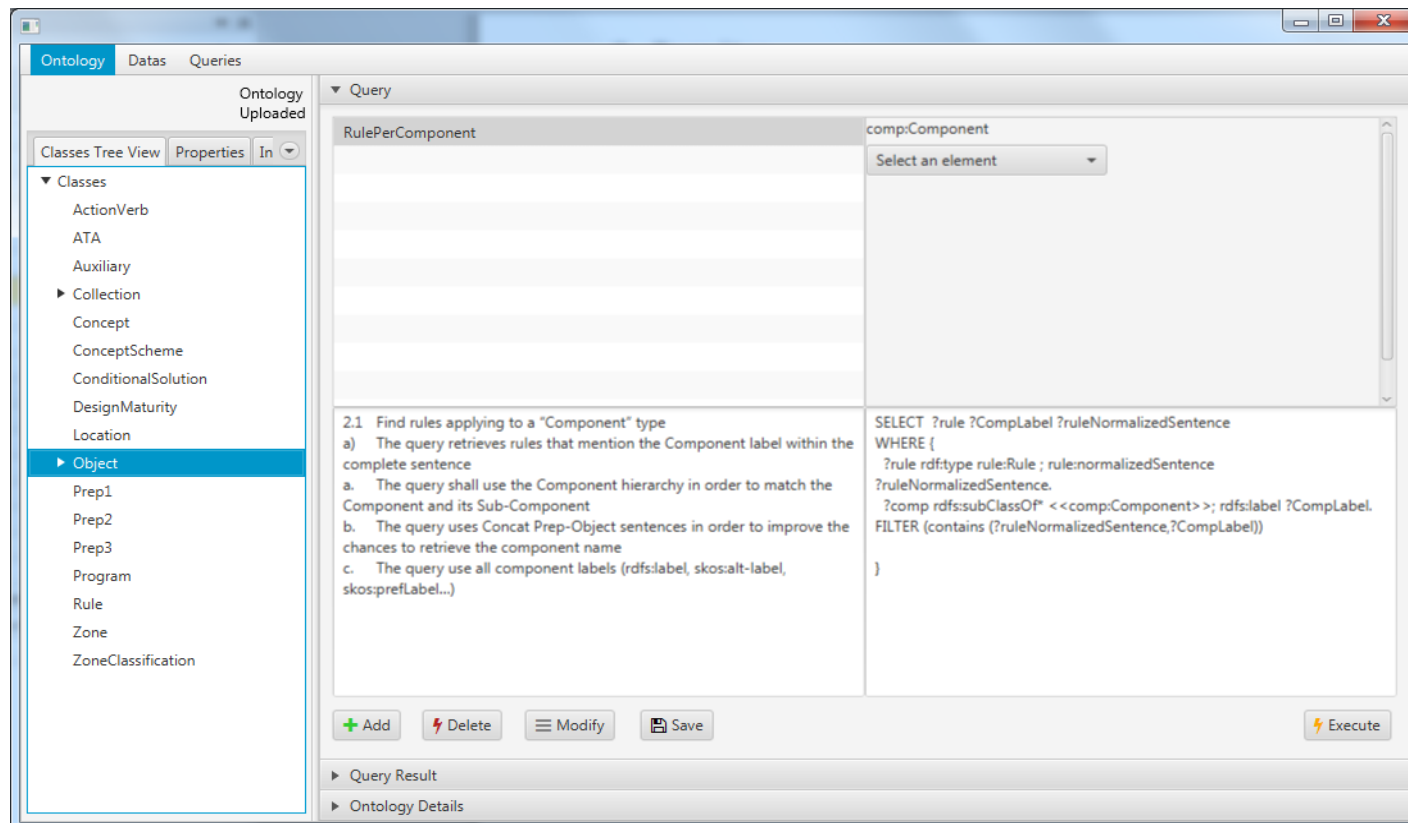

- NLP **Parsing** uses this taxonomy. Labels + assumptions such as a physical component may be referred to using its name or its reference or both concatenated
- **Inference** rule: a rule applying to a component type (Attachment device) applies to its subtypes (P-clamp)
- **Document** display : when searching rules applying to a component type (P-Camp) → retrieve and display rules applying to super-types

# SPARQL queries

Status : model based queries specification

- Preliminary study with Loria (Text to RDF)
- 1 internship on RDFizer and Query management

# UC-TR-01 - Documents of Quality Assurance Department

*Ersan GÜRDOĞAN*  
*HISBİM*

# UC-TR-01 Documents of Quality Assurance Department

<b>UC-TR-01</b>	<b>Documents of Quality Assurance Department</b>
<b>Version</b>	V1.0.0 dated 15-Nov-2014
<b>Description</b>	To create faster and more accurate the forms that are used in quality control progress and trigger related forms (re-work form triggering, revision needed, approved, rejected etc.)
<b>Actors</b>	Quality Managers, Quality Measurement Specialists, Quality Control Personnel, Quality Auditors, Production Crews
<b>Assumptions</b>	Quality control measurement units are standard Rejected and Approved products forms are standard Quality Certification standards are always applied
<b>Steps</b>	Products information forms are created according to product information comes from ModelWriter system Products are measured by quality control department authorized personnel's according to standards To decide product is standard or not according to measurement report Product would be sent rejected products section if its measures are out of standards ModelWriter system is created Rejected Product Quality Form Else Approved Product Quality Form is created by ModelWriter System Approved products are sent to warehouse as accepted products
<b>Alternatives</b>	If rejected products' measurement out of range in rework standards, it means cannot be applied rework on this product, it returns to scrap. Then it should be sent wasteland.
<b>Issues</b>	Standardizing form designs is hard because of all customers have their own unique reporting tools/formats

# UC-TR-02 - Non-Disclosure Agreements

*Ersan GÜRDOĞAN*  
*HISBİM*

# UC-TR-01 Non-Disclosure Agreements

UC-TR-02	Non-Disclosure Agreements
Version	V1.0.0 dated 15-Nov-2014
Description	<p>Non-Disclosure Agreement (NDA), also known as a confidentiality agreement (CA), confidential disclosure agreement (CDA), proprietary information agreement (PIA), or secrecy agreement (SA), is a legal contract between at least two parties that outlines confidential material, knowledge, or information that the parties wish to share with one another for certain purposes, but wish to restrict access to or by third parties. It is a contract through which the parties agree not to disclose information covered by the agreement. An NDA creates a confidential relationship between the parties to protect any type of confidential and proprietary information or trade secrets. As such, an NDA protects nonpublic business information.</p> <p>NDAs are commonly signed when two companies, individuals, or other entities (such as partnerships, societies, etc.) are considering doing business and need to understand the processes used in each other's business for the purpose of evaluating the potential business relationship. NDAs can be "mutual", meaning both parties are restricted in their use of the materials provided, or they can restrict the use of material by a single party. It is also possible for an employee to sign an NDA or NDA-like agreement with an employer. In fact, some employment agreements will include a clause restricting employees' use and dissemination of company-owned confidential information.</p>
Actors	Responsible/Authorized personnel in both parties.
Assumptions	Agreements are prepared and written according to European Business Law.
Steps	<p>To define both parties who would sign the NDA</p> <p>To write items of agreement according to scope of NDA</p> <p>Reviewing agreement by decision maker then getting approval</p> <p>Sharing NDA each other</p> <p>Send feedback to ModelWriter system if any change apply on NDA</p> <p>Sharpen final version of NDA then signing by both parties</p>
Alternatives	<p>After sharing NDA, both parties sign without any change and no feedback.</p> <p>Cancellation of NDA</p>
Issues	Different laws could be applied in out of European Union

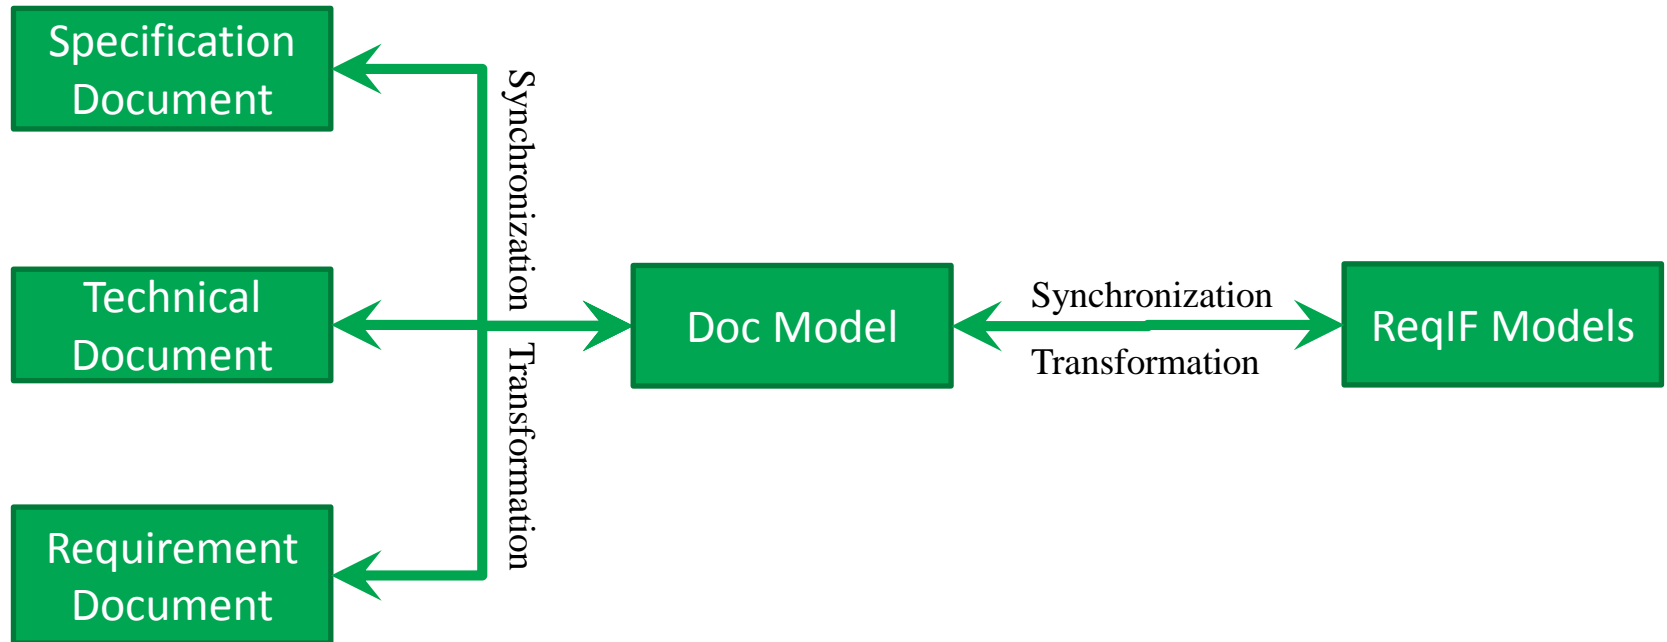

# UC-TR-03 - Synchronization of ReqIF models from requirement specifications

*Ferhat Erata*  
*UNIT*

- Technical documents are usually long and have complex structure
  - For example requirement or specification documents
- These documents keep changing in the time frame and need to be consistent with the other artifacts
  - For example, with a ReqIF model
- In this use case we aim to keep these documents and models synchronized
  - This will include bidirectional transformation of documents and models

# UC-TR-03 - Synchronization of ReqIF models from requirement specifications

- At the current state of this UC:
  - The transformation is done in one way (left to right)
  - The synchronization is done only between DocModel and ReqIF models

## Sample Applications:

- Airbus SIDP templates  $\Leftrightarrow$  ReqIF
  - Havelsan Requirement doc templates  $\Leftrightarrow$  ReqIF
  - University Management System docs  $\Leftrightarrow$  ReqIF
  - Eclipse RMF specifications  $\Leftrightarrow$  ReqIF
- 
- The initial implemented version of this use case will be presented in the demonstration session.

Design Principles Applicable to the xx System  
Installation - Program

SIDPREF1

## 7 Design Principles

### 7.1 Design Principles Applicable to the Entire Design

#### General

#### SIDP92A001V-A-269

The effects of thermal variations, structural deformation, pressurization variation, etc., shall be taken into account.

#### SIDP92A001V-A-280

Each item in direct contact with ATA92 bundles shall be qualified to withstand conditions detailed in Table 3 below.

Type of Route	All areas except in high temperature zones		High temperature zones	
	Peak condition *	Continuous operating condition **	Peak condition *	Continuous operating condition **
G routes	170°C	170°C	260°C	260°C
P, X routes	150°C	95°C	260°C	200°C
S, R, T, U, V routes	85°C	85°C	130°C	130°C
Others types (M, S, Q, ...)	135°C	95°C	260°C	200°C

\* duration of 100 hours  
\*\* duration A/C life

Table 3. Operating conditions for items in direct contact with ATA92 bundles  
Attachment devices placed inside boxes, which contain power cables, shall withstand.

- a minimum of 150°C for peak condition and
- a minimum of 110°C for continuous operating condition.

## HAVELSAN ÖZEL

**HAVELSAN YGO PROJESİ  
YAZILIM KONFIGÜRASYON  
YÖNETİMİ  
TEKNİK ŞARTNAMESİ**

Doküman No : HVL-YGO-TS-003  
Yayın No : 1.0  
Yayın Tarihi : Ağustos 2011

**1. İSTEK VE ÖZELLİKLER****1.1 GENEL ÖZELLİKLER****1.1.1 Yönetim ve Yapılandırma**

**1.1.1.1** Bütün HAVELSAN Birimlerinin ve Projelerinin merkezi ve tek bir kurulum üzerinde çalışmasına olanak sağlanacaktır.

**1.1.1.2** İşletim sistemlerinden bağımsız olarak grafik arayüz ile erişime olanak veren istemci sağlanacaktır.

**1.1.1.3** Konfigürasyon yönetim sistemi sunucularına bağlı olmadan çalışılmasına olanak sağlanacaktır.

**1.1.1.4** Çoklu kullanıcı desteği sağlanacaktır.

**1.1.1.5** İşletim sistemlerinden bağımsız olarak ve en az görüntüleme amaçlı örün (Web) tabanlı çalışılmasına olanak sağlanacaktır.

**1.1.1.6** Yeni kullanıcı tanımlanmasına, var olan kullanıcıların güncellenmesine ve silinmesine olanak sağlanacaktır.

**1.1.1.7** Kullanıcıların gruplara atanmasına ve gruplardan çıkartılmasına olanak sağlanacaktır.

**1.1.1.8** Kullanıcı profiline ve proje yapısına göre var olan deponun genişletilmesine, yeni depo tanımlanmasına olanak sağlanacaktır.

**1.1.2 Yetkilendirme ve Güvenlik**

**1.1.2.1** Kendi veritabanındaki kullanıcı bilgilerini kullanarak kullanıcı kimlik denetimi yapabilecektir.

**1.1.2.2** Aktif Dizin'de (Active Directory) tanımlı kullanıcı bilgilerini kullanarak kullanıcı kimlik denetimi yapabilecektir.

## University Management System docs

### 1 USE CASE UC1: SIGN IN

**Primary Actor:** Student, Lecturer.

**Stakeholders and Interests:**

- Student: Wants simple user interface, fast response, no system errors.
- Lecturer: ?

**Preconditions:**

- Student is registered.

**Success Guarantee (Postcondition):**

- Student is logged in.

**Main Success Scenario (or Basic Flow):**

- Student visits system home page.
- System shows home page with login form and sign up button.
- Student enters his/her username and password then click login button.
- System shows Student's home page.

**Extensions (or Alternative Flows):**

\*a. At any time, system fails, to support recovery, ensure all transaction sensitive state be recovered from any step of the scenario.

- Student restarts System and requests recovery of prior state.
- System reconstructs prior state.
  - System signals error to the Student, records the error, and

state.

3a. Student enters invalid username or password.

- System shows errors and request to Student to retry.
- Student enters his/her username and password.

4a. System detects failure to communicate with server.

- System signals error and rejects the request.

## 1 USE CASE UC1: CREATE A NEW SPEC OBJECT

### Preconditions:

- ReqIF model exists and is open.

### Main Success Scenario (or Basic Flow):

1. We assume that a Specification exists and is open (not required for alternative scenario)
2. Double click on the cell in the Specification Editor to be edited.
3. Select the Child or Sibling submenu.
4. Select the desired Spec Object Type (or none) from the submenu.
5. Note that some cells may not be editable, in which case nothing will happen.

### Alternative 1 Create in Outline:

- \*a. The same workflow works for elements that are shown underneath "Specifications" in the outline.
- 2a. It is also possible to create children of the "SpecObjects" folder in the outline, but in this case, no SpecHierarchy will be created.

### Alternative 2 Keyboard Shortcut:

- \*a. The keyboard shortcut Ctrl-Enter will create a SpecHierarchy sibling to the currently selected element and immediately go into edit mode in the currently selected column.

## 2 USE CASE UC2: EDIT SPEC OBJECT

### Preconditions:

- A ReqIF model exists, is open and at least one SpecObject exists.

### Main Success Scenario (or Basic Flow):

1. We assume that a Specification exists and is open (not required for alternative scenario)
2. Open a row's context menu (or in the empty editor space)

Paragraph 1
Paragraph Alternative 1 Delete in SpecObjects folder in Outline
Paragraph *a

ID	Description
R 1	Use Case UC1: Create a new SpecObject
R 1.1	Preconditions
R 1.1.1	ReqIF model exists and is open.
R 1.2	Main Success Scenario (or Basic Flow)
R 1.2.1	We assume that a Specification exists and is open (not required for alternative scenario)
R 1.2.2	Double click on the cell in the Specification Editor to be edited
R 1.2.3	Select the Child or Sibling submenu
R 1.2.4	Select the desired Spec Object Type (or none) from the submenu
R 1.2.5	Note that some cells may not be editable, in which case nothing will happen
R 1.3	Alternative 1 Create in Outline
R 1.3.1	The same workflow works for elements that are shown underneath "Specifications" in the outline
R 1.3.2	It is also possible to create children of the "SpecObjects" folder in the outline, but in this case, no SpecHierarchy will be created.
R 1.4	Alternative 2 Keyboard Shortcut
R 1.4.1	The keyboard shortcut Ctrl-Enter will create a SpecHierarchy sibling to the currently selected element and immediately go into edit mode in the currently selected column.
R 2	Use Case UC2: Edit SpecObject
R 2.1	Preconditions
R 2.1.1	A ReqIF model exists, is open and at least one SpecObject exists.
R 2.2	Main Success Scenario (or Basic Flow)
R 2.2.1	We assume that a Specification exists and is open (not required for alternative scenario)
R 2.2.2	Open a row's context menu (or in the empty editor space)
R 2.2.3	Alternatively, hit enter or space in that cell
R 2.2.4	In both cases, the double-clicked / selected cell will switch to edit mode
R 2.2.5	This results in a new SpecHierarchy being created that is linked to a newly created SpecObject with the same name
R 2.3	Alternative 1 Edit in Properties View
R 2.3.1	A selected element (no matter whether in Specification Editor or Outline or elsewhere) will be shown in the Properties View
R 3	Use Case UC3: Delete SpecObject
R 3.1	Preconditions
R 3.1.1	A ReqIF model exists, is open and at least one SpecObject exists.
R 3.2	Main Success Scenario (or Basic Flow)
R 3.2.1	If an element is deleted from the specification (so essentially a SpecHierarchy), and no references to the element exist, it will be removed, no matter whether in the Specification Editor or in the Outline
R 3.3	Alternative 1 Delete in SpecObjects folder in Outline
R 3.3.1	If the SpecObject is deleted from the SpecObjects folder in the outline, it will be removed, no matter whether in the Specification Editor or in the Outline

## Next Steps

---

- Next steps:
  - ReqIF model transformation to documents (bi-directional transformation)
  - Synchronization between a document and Doc-Model (fully synchronization)

# UC-TR-04 - Integration with Application Lifecycle Management (ALM) Tools

UC-TR-03	Integration with ALM tools
Versioning Info	V1.0.0 dated 28-Apr-2015
Description	<p>Show that the ModelWriter can extract required elements from structured requirement objects in ALM tool to generate automatic design model.</p> <p>Show that the ModelWriter's can generate requirements specification document from structured requirement objects in ALM tool.</p>
Actors	Requirements Engineer/Manager, System/Software Architect
Assumptions	<ul style="list-style-type: none"> <li>All the traceability information would continue to be followed from the structured requirement object via ALM tool. (ModelWriter does not need to have any traceability information)</li> <li>Textual representation of requirements are stored in MS Word documents.</li> <li>Design models are stored in Sparx Systems Enterprise Architect.</li> <li>Structured requirement objects are stored in Microsoft Team Foundation Server.</li> </ul>
Steps	<p><u>Scenario1:</u></p> <ul style="list-style-type: none"> <li>From a set of structured requirement objects in the ALM tool, ModelWriter would create a natural-language text requirement document.</li> </ul> <p><u>Scenario2:</u></p> <ul style="list-style-type: none"> <li>From a set of structured requirement objects in the ALM tool, ModelWriter would create/synch a design model.</li> <li>From a design model, ModelWriter would create/synch to a set of structured requirement objects.</li> </ul>
Variations (optional)	Scenario1: From a natural-language text requirement document, ModelWriter would create/synch to a set of requirement objects.
Non-functional (optional)	<p>The system should have a Word plugin for natural-language text transformation.</p> <p>The natural-language support should be in both English and Turkish</p>
Issues	A common format between ALM platforms and ModelWriter may need to be implemented.

## Discussion

# Requirement LifeCycle

## Requirements in ALM

---

- Traceability with other artifacts is key
  - Requirements to other requirements
    - Customer/System/Software/Hardware..
    - Dependency relation between requirements
  - Requirements to tasks (Project management)
  - Requirements to Test Cases
  - Requirements to Design elements
  - Requirements to generated documents
  - Requirements to source code
  - Requirements to Build
  - Requirements to bugs
  - Requirements to risks
  - ...

# Havelsan Ext - Document Generation

Preview

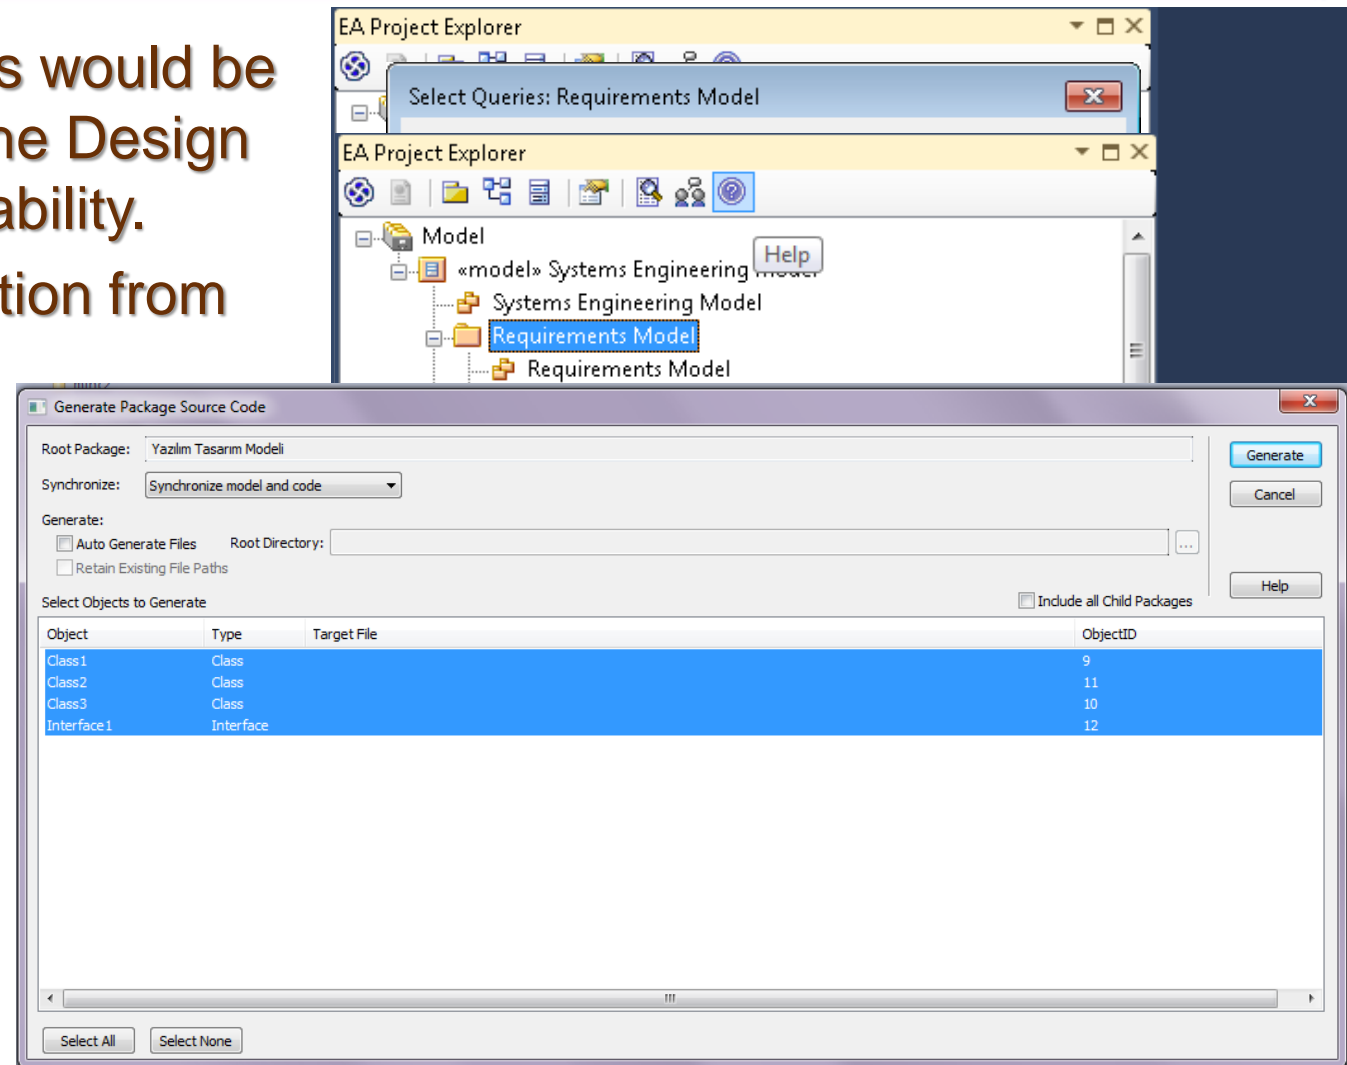

Word Extension

Support for Templates

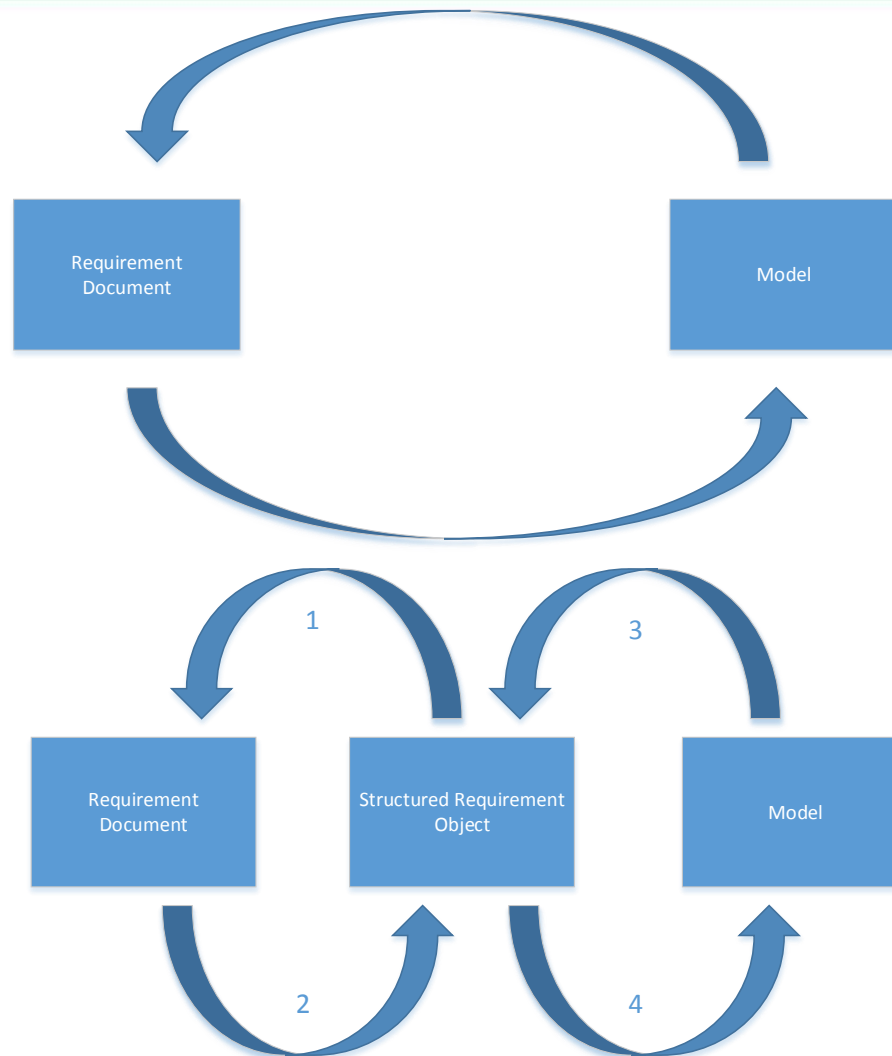

# Requirements - Design Model Traceability

- Requirements would be imported to the Design tool for traceability.
- Code generation from design

# HAVELSAN Use case for ModelWriter

Currently we support scenario #1 and #4, and interested in Scenario #3, #2

# UC-TR-05 - Synchronous Business Process Design with Use Cases

*Geylani Kardaş*

*KoçSistem*

- Use cases are one of the main approaches to represent the requirements.
  - A use case is a list of actions or event steps, typically defining the interactions between a role (a.k.a actor in the UML).
- BPMN provides a graphical notation for specifying the processes in a diagram based on a flowcharting technique (similar to activity diagrams in UML).
  - The aim is to support business process management, for both technical and business users, by providing a notation which enables to represent complex process semantics.
- However, the transformation and synchronization of use cases and BPMN models are challenges addressed in this UC.

- Applications:
  - University Management System Use cases docs  $\Leftrightarrow$  BPMN
  - Eclipse RMF use case specifications  $\Leftrightarrow$  BPMN
- At the current state of this UC:
  - The transformations are done in one way (left to right)

### 3 USE CASE UC3: FILE UPLOAD

Primary Actor: Student

Stakeholders and Interests:

- Student: Wants simple user interface, fast response, no system errors.

Preconditions: Student is identified and authenticated.

Success Guarantee (Postcondition): File is uploaded.

Main Success Scenario (or Basic Flow):

1. Student visits file upload page.
2. System opens file browser dialog.
3. Student chooses the file that she/he is wanted to upload.
4. System starts the upload process.

Extensions (or Alternative Flows):

\*a. At any time, System fails: To support recovery, ensure all transaction sensitive state and events can be recovered from any step of the scenario.

1. Student restarts System and requests recovery of prior state.
2. System reconstructs prior state.

2a. System detects anomalies preventing recovery:

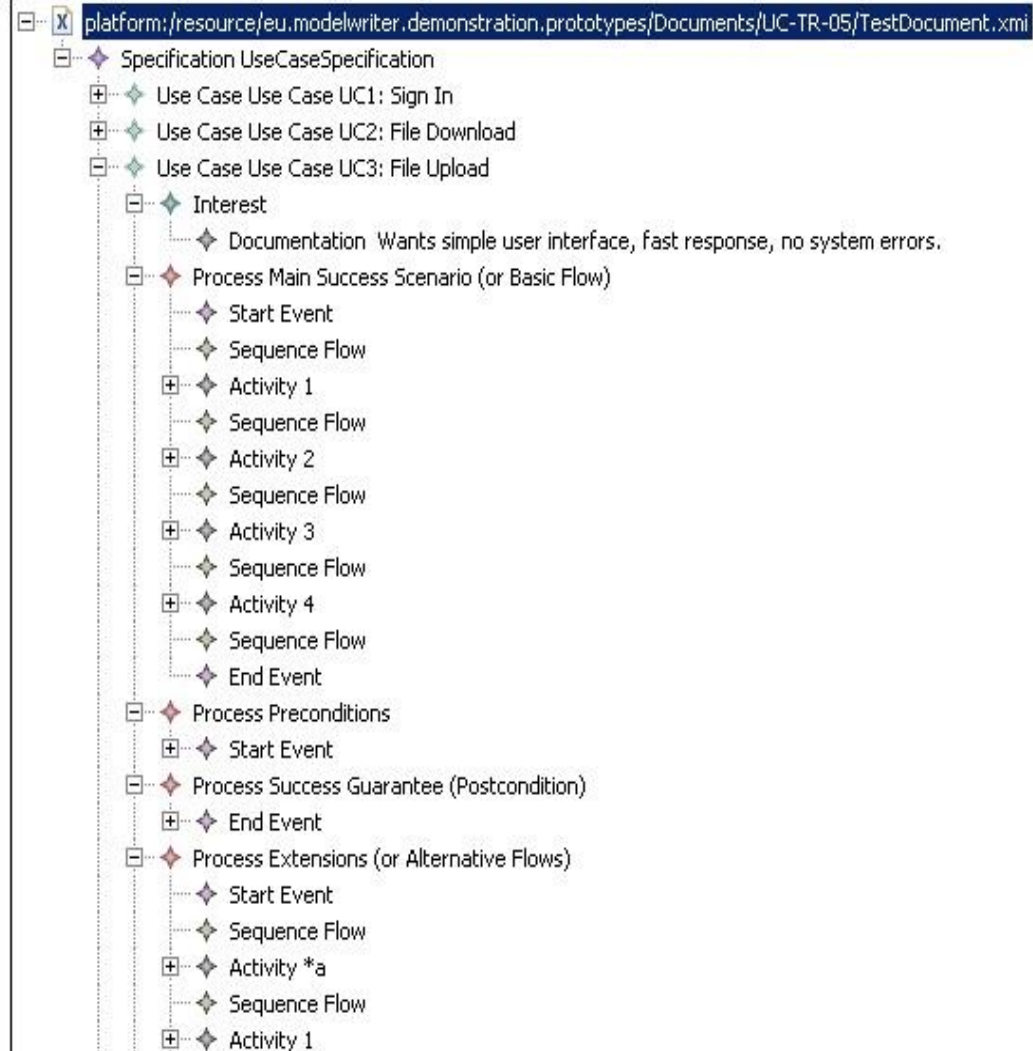

1. System signals error to the Student, records the error, and enters a clean state.

3a. Invalid file:

1. System shows the error and returns the file upload page.

4a. System detects failure to communicate with server:

1. System signals error and rejects the request.

- Demonstration:
  - The initial implemented version of this use case will be presented in the demonstration session.
  
- Next steps:
  - BPMN model transformation to Use case documents (bi-directional transformation)
  - Synchronization between documents and BPMN Models
  - Using technique documents of Ford-Otosan;
